## Server Load

### Moved back on Cloudflare

This website is running on a Virtual Private Server (VPS). The stats are showing plenty of memory, but the CPU load has been running at 100% I used to have the website on Cloudflare, but at times it seemed that Cloudflare was causing more problems than it solved. I have just moved back onto Cloudflare to try and block hackers and DDOS attacks. Lord willing this will help solve these issues.
